AUGUST 2018:
Launch of the 7th Call for Interreg 2 Seas projects
on the topic of « Low-carbon »!

The Interreg 2 Seas Programme, which works for the setting up of cross-border projects between France, the UK, Belgium (Flanders) and the Netherlands, is devoting nearly €50 M to the adoption of "low-carbon" technologies over the period 2014-2020. The 6th call for projects was closed at the beginning of May. However, while the Brexit negotiations are still under way, many very highly positive signals are being sent out about the possibility of continuing with the Programme.

This is the reason why the Programme authorities have decided to continue with the project selection process after March 2019, with a 7th call for projects. Launched on 1 August, it will be closed on 21 December next.
