POWER-GEN EUROPE EXPO - 27 to 29 June, Cologne, Germany

From 27 to 29 June Power-Gen Europe Expo is being held at the Koelnmesse Exhibition Centre in Cologne. It is a programme of international level conferences designed by industry for industry and entirely dedicated to the energy sector.

Created 25 years ago, this event sets out to be a preferred meeting-place for the international energy players. For 3 days, POWER-GEN Europe and Renewable Energy World Europe cover all the aspects of today's centralised energy production and distribution sector (?? sens à confirmer) through a programme combining strategical and technical presentations with the biggest exhibition of electrical plant and equipment in Europe – fuel-flexible gas turbines, fast ramp gas and diesel engines, hybrid electric power stations, energy storage systems or again smart grid technology.

The main suppliers, subsuppliers, service providers and end users of the entire energy production value chain, collect and share information and compare the points of view on the opportunities and the challenges faced by a sector that is evolving at a very fast rate. The following in particular are partners of the event: VDMA (Verband Deutscher Maschinen - und Anlagenbau, Mechanical Engineering Industry Association), EPPSA (The European Power Plant Suppliers Association), EASE (European Association for Storage of Energy), European Turbine Network or again IPPF (The Independent Power Producers Forum).

For more information, go to the event's website:
